Professional Summary

Data Engineer with hands-on experience in building scalable data pipelines using Apache Spark, PySpark, and Databricks. Skilled in designing ETL workflows, data warehousing solutions, and modern architectures such as Medallion Architecture and Delta Lake. Experienced with cloud-based data platforms, large-scale distributed processing, and workflow orchestration using Apache Airflow, along with a strong understanding of data modeling and performance optimization. Additionally, experienced in frontend development using React.js, HTML5, CSS3, javascript, Tailwind CSS, Framer motion, and Lucide-react.

Skills

Data Engineering: ETL Pipelines, Data Warehousing, Delta Lakehouse, Medallion Architecture

Cloud / Big Data: Apache Spark, PySpark, Databricks, Delta Lake, AWS (S3, IAM, Glue), BigQuery, Hadoop

Data Workflows: Apache Airflow, Data Pipeline Scheduling, Workflow Automation

Languages: Python (Requests), SQL, Perl, C++

Frontend Development: HTML5, CSS3, JavaScript, React.js, Tailwind CSS, Framer Motion, Lucide React

Projects

Healthcare Data Analytics | *Python, SQL, PySpark, Databricks, AWS S3, AWS Glue, Apache Airflow* Feb 2026 – Mar 2026

- Engineered an end-to-end healthcare data pipeline using PySpark, Databricks, and Apache Airflow for orchestrating ETL workflows, enabling automated data ingestion, transformation, and scalable processing of large datasets.
- Optimized data processing using Delta Lake and SQL-based transformations, ensuring data consistency, improved query performance, and delivering analytics-ready datasets for downstream consumption.

Movie Recommendation System | *HTML, CSS, JavaScript, Tailwind, API, React, Express, Node, MongoDB* Jan 2024

- Designed and deployed a high-performance movie recommendation API, reducing server response time by 50% through backend optimizations and improving overall user experience.
- Enhanced recommendation quality using data-driven logic and optimized filtering techniques, increasing user engagement and personalization across the platform.

Experience

Persistent Systems | *Contract Consultant*

March 2026 – Present

- Contributing to the **SSAP (Sales Services Automation Platform)** project, focusing on building and optimizing data pipelines to support large-scale analytics and reporting use cases.
- Developed and optimized **big data processing workflows** using **PySpark, Databricks, Python, and SQL** to handle high-volume, distributed datasets efficiently.
- Worked with **cloud-based data architectures** leveraging **AWS and GCP**, ensuring scalable, reliable, and performance-optimized data solutions.

Revature | *Trainee Software Engineer*

Feb 2026 – March 2026

- Completed structured training in **data engineering fundamentals**, including **Python, SQL, PySpark, Databricks**, and distributed data processing concepts.
- Built hands-on projects involving **ETL pipelines**, data transformation, and optimization on **AWS and GCP** cloud environments.
- Applied software engineering best practices such as version control, modular design, and collaborative development in project-based learning.
